The Group

benders

Wrexham (UK)

Founded in 1899 in Haggerston, London, as a manufacturer of stationery. Then it invested in baking paper containers and in 1964 it was the first to produce dispenser napkins used in the nascent fast food McDonald's style. In the 1980's the business moved to Wrexham and **today it is a leading manufacturer of vending cups and folded paper napkins in the UK.**

flo
EUROPE

Ruitz (FR)

Located in northern France, it was created in 2003 as a production site specialized in the production of food packaging and folded napkins for consumer goods and automatic cups for the vending industry. Since 2017 it has undergone an industrial conversion for the transition from plastic to paper which led to a **current capacity of over 1 billion paper cups.**

flo

Fontanellato (IT)

A family-owned company founded in Parma in 1973, FLO started its activity producing cups for the vending sector. In the last decade, driven by more than 50 years of experience in the thermoforming of technical products, the company has set up a division that produces capsules for the latest generation single serve coffee.

ISAP

Verona and Catania (IT)

The market leading producer of vending cups and containers since 1963. With the two sites in Verona and Catania, renowned for the development of new technologies and new materials, from traditional polymers, new bioplastics, paper-board and composite fibre. The introduction of the Verona PET processing facility and with it the R-PET product ranges.

Our History

The history of the FLO Group is a story of collaborations and successes, which has lasted for 50 years, during which the company has grown increasingly robust on its path thanks to shared choices, effective entrepreneurial investments, a vision of a better future to be built together.

1970

Everything started with an idea

From an idea of Antonio Simonazzi in Fontanellato, near Parma, FLO S.p.A. was founded in 1973, a company specialized in the production of plastic cups for vending machines.

1980

Entry into the Retail sector

In these years of economic boom, the market for disposable products for domestic consumption is experiencing strong development, in step with FLO's corporate growth.

1990

Conquering Europe

FLO's expansion in Europe begins, with new commercial offices in the most strategic countries: FLO Vending in France, FLO Deutschland in Germany, Nupik&FLO in England.

2000

From a family business to a multinational corporation

The creation of FLO Europe and the acquisition of ISAP, in association with two important companies in the sector, represent a further turning point for serving international markets efficiently and quickly, thanks to new strategic production and logistics hubs.

2010

Towards a sustainable future

FLO develops sustainable innovation applied to processes and products, raw materials and plant management, to offer greener solutions by reducing its own environmental impact. In **2019** FLO Group acquires majority control of ISAP and BENDERS Paper Cups.

2020

New horizons

The total conversion of the FLO Europe plant from plastic to paper manufacturer is completed and the paperboard division is launched at the ISAP headquarters in Catania. In **2023** a new paper division is also inaugurated at FLO, thus continuing the strategy of advanced and sustainable diversification, which can improve all company performance, not only from an environmental point of view.

Our Vision

The world is in motion. We want to be the heralds of a packaging culture as a fundamental ally of modern society, because it guarantees the hygiene and safety of food by making it accessible in every situation.

Our Mission

We design and make tableware and innovative food containers, beautiful and capable of combining respect for the environment and food safety, to simplify and improve people's life.

Sustainability

Awareness and transparency the basis of our choices

We are convinced that a Governance capable of defining a strategy integrated with ESG principles can guarantee the solidity of the business in the long term, transforming market challenges into real opportunities for innovation and differentiation, while pursuing a continuous improvement agenda.

Responsibility and listening at the heart of our business

We promote the development of a sustainable business model by listening to all stakeholders, taking account of all the feedback, advice and guidance provided to us in a collaborative approach to build our goals.

The importance of ecodesign

At the FLO Group, we are aware that the environmental impact of a product is determined at the planning stage. That is why we design our products based on our multi-disciplinary ecodesign approach, to guarantee the primary product functions, and also to guarantee the impact in the environment.

“We adopt responsible industrial behaviour to ensure sustainable economic growth for the environment, people and the land”

Research and Development

Fontanellato (IT)
Our applied research laboratory
It operates both in the design phase, from the study of materials to the validation and prototyping phase, and in the evaluation phase of the performance of the finished product, subjecting it to streee tests and chemical tests to simulate their behaviour in everyday situations.

Verona (IT)
Analytical laboratory FCP Lab
Independent and accredited by ACCREDIA (ISO 17025) is specialized in chemical, physical-mechanical, and microbiological analyses of food packaging. The laboratory provides services to all operating companies within the Group and the external market, ensuring expertise, independence, and impartiality.

“Design according to the principles of ecodesign, laboratory studies, and research are at the basis of innovation under the FLO brand.”

The attitude for tailor made
We are aware that there is no such thing as perfect packaging, but there are products that are better than others in certain contexts and uses. Thanks to our consultative approach, we can design tailor-made products that can be used perfectly throughout their life cycle and we can guarantee our professional technical support to our customers.

“A safe product for the well-being of the community”

Quality

For us at FLO, food packaging is not just a tool to contain or sell a product, it represents much more. A promise of total quality for our customers, a quality that we are committed to ensuring on a daily basis.

- 
- A group of people are gathered outdoors at night for a social event. In the foreground, a woman in a red and white striped dress is smiling and serving food from a table. The table is laden with various dishes, including pizzas, breads, and bowls of fruit like grapes and watermelon. Other people are visible in the background, some sitting and some standing, all appearing to be enjoying the evening. The scene is illuminated by warm, glowing string lights hanging from above, creating a cozy and festive atmosphere. The background is filled with lush greenery.

Retail & HoReCa

Compostable organic fiber tableware coated with a mineral coating

Alpha® is the first range of plates, cups, cutlery, and containers made with an innovative material of natural origin and plastic free: fiber treated with Qwarzo®, the revolutionary mineral coating that ensures excellent product performance. 100% PFAS free.

A FORCE OF NATURE

Values

Biobased

The Alpha products are all produced exclusively from natural raw materials.

The technology that couples silica coatings to paper is a natural alternative to the PE coating of traditional paper products and dispersion coatings. The result is a **Plastic Free** products.

PEFC Certificates

PEFC guarantees origin from sustainably managed forests in accordance with EU regulations.

The paper is traced through the supply chain, from the forest guaranteeing the origin of the finished product.

Biodegradable and Compostable

An important feature of the silica-based mineral coating is that it does not affect the compostability of cellulose, it remains neutral with respect to the cellulose ability to decompose in the environment.

The reason is that silica is already present in nature and returns there without having to undergo further degradation.

Recyclable with paper

Aticelca certifies the amount of raw material which can be recovered through recycling in comparison to the original product.

Alpha products have achieved an A rating, corresponding to a quantity of recovered material up to 98%.

PFAS Free

PFAS are fluorinated molecules found in traditional pulp plates, added to make cellulose resistant to liquids and fats.

The carbon-fluorine bond in PFAS is among the strongest in organic chemistry and for this reason these molecules are resistant to degradation and tend to accumulate in soil, as well as in ground and surface water.

All Alpha products are **PFAS FREE**.

Performance

Mechanical resistance

Alpha products are strong and durable.

The high thickness of the cardboard combined with the action of the mineral coating, which increases their mechanical performance, makes them suitable and practical for use with all kinds of liquids and food, including steaks and lasagne.

Hydrophobicity

Hydrophobicity was assessed with the COBB test, which measures water absorbancy, i.e., the amount of water absorbed in a defined time interval. **Alpha®** appears to have similar performance to plastic, which is by far the best water-repellent material or packaging.

Plastic COBB 180 = 0g/m²

Paper COBB 180 = 40g/m²

Alpha® COBB 180 = 2g/m²

Thermal Resistance

Alpha® products are suitable for use with all liquids and foods, both cold and hot.

The plates can also be used to heat up food in the oven or microwave.

Safety

The material from which the Alpha line is made is inert and safe for food use.

We carry out strict controls according to international standards.
